

WHAT IS CLAIMED IS:

1. An automatic hair washing device comprising;
 - a. a basin having a hollow interior,
 - b. a plurality of rotating nozzle assemblies rigidly connected to the interior of said basin for spraying a plurality of selected liquids onto the hair of the user of said hair washing device, and
 - c. a hood rotatably connected to said basin, said hood having flexible face cover therein for covering the hair and ears of said user and exposing the face of the user.
2. The automatic hair washing device of claim 1 wherein said liquids comprise water, shampoo, and hair conditioner.
3. The automatic hair washing device of claim 1 wherein said rotating nozzle assemblies have a plurality of nozzles therein which rotate in said assembly as liquids are sprayed therefrom.
4. The automatic hair washing device of claim 1 wherein said plurality of nozzles are three in number.
5. The automatic hair washing device of claim 1 wherein one of said selected liquids is water and wherein temperature controls are connected to said basin for controlling the temperature of said water.
6. The automatic hair washing device of claim 2 wherein said cover has an elastic inner edge for covering the hair and ears of said user.
